

19121 Geographic information – Imagery and gridded data

To develop a type 3 report, which addresses the manner by which TC 211 should handle imagery and gridded data in the context of the field of Geographic information/Geomatics. To identify those aspects of imagery and gridded data that have been standardized or are being standardized in other ISO committees and external organizations that influence or support the establishment of raster and matrix data standards for geographic information. To identify the components of those identified ISO and external imagery and gridded data standards that can be harmonized with the TC 211 Geographic information/Geomatics standards.

To develop a plan for TC 211 to address Imagery and gridded data in an integrated manner, within the suite of TC 211 base standards.

The standard is of particular relevance to the following sectors:

Sector	Of particular interest
Developers of GIS products	
Developers of GIS application systems	
Producers/ suppliers of geographic data	
Users of geographic data and GIS	
Developers of standards	Yes

For further information on this standard and its implementation, please contact ISO/TC 211 secretariat via www.isotc211.org.
