ISO Workshop on address standards

Considering the issues related to an international address standard

Sunday, 25 May 2008, 09:30-16:30

National Survey and Cadastre, Rentemestervej 8, 2400 Copenhagen NV, Denmark

A special interest meeting will be held under the auspices of Working Group 7, *Information Communities*, of ISO/TC 211, *Geographic information/Geomatics*, and is sponsored and hosted by the National Survey and Cadastre, Denmark (KMS-DK).

The purpose of this workshop is to consider the issues related to an international address standard:

- What is an address? What is the definition of an address in current national address standards?
- What is the scope of current national address standards?
- Why do we need a national address standard?
- Can we benefit from an international address standard?
- Is there enough reason to move ahead with an international address standard?
 - If yes, what should the scope (more or less) be and how do we proceed?
 - Should we start with a Stage 0 Review Summary of the issues?

The workshop will provide national and international perspectives on address standards, and there will be some time for discussing the way forward at the end.

Space at the workshop will be limited and for catering and venue access arrangements we need to know in advance who will attend, since the workshop is held over a weekend. Places will be allocated on a first-come-first-serve basis, but the *deadline for responding is 5 May 2008*. Workshop participation is free of charge but transport and accommodation have to be provided by delegates themselves.

If you want to attend the workshop, please respond to Morten Lind from the KMS-DK via e-mail at mol@kms.dk. Include your full name, e-mail address and organization so that access to the building can be arranged.
